

Security, Scalability and Manageability: Having it all

Security vs. manageability. The escalating use of cryptography has brought forth a huge challenge for organizations: protecting and managing hundreds and even thousands of cryptographic keys. This session examines the tension between encrypting all of your critical information while still effectively managing all the resulting cryptographic keys. Dr van Someren will discuss secure key lifecycle management across an enterprise – including remote key management, non-hierarchical key management and centralized key management strategies.

Speaker: Dr Nicko van Someren, Chief Technology Officer, nCipher
